

SENIOR SOFTWARE ENGINEER

Le Ba Dat - Tom Le

Senior Software Engineer based in Vietnam with 7+ years of experience building enterprise web, mobile, and backend systems. I focus on .NET backend development, full-stack delivery, identity and access solutions, maintainable architecture, and reliable deployment workflows across cloud and Linux infrastructure.

■ PROFILE

Senior Software Engineer based in Vietnam with 7+ years of experience building enterprise web, mobile, and backend systems. I focus on .NET backend development, full-stack delivery, identity and access solutions, maintainable architecture, and reliable deployment workflows across cloud and Linux infrastructure.

- Designs and develops backend services, APIs, authentication flows, and business systems with .NET.
- Builds enterprise web applications with Angular, Blazor WebAssembly, ASP.NET MVC, and modern frontend tooling.
- Delivers mobile applications with Flutter, Xamarin, and React Native integration patterns.
- Automates delivery with Docker, Nginx, Azure, GitHub Actions, GitLab CI/CD, and container registries.

■ EXPERIENCE

Senior Software Engineer

May 2024 - Present

DP UNITY TECHNOLOGY CORPORATION

Vietnam

- Design and develop backend services with modern .NET for enterprise web, mobile, and service-based systems.
- Build Blazor WebAssembly portals and Flutter mobile applications connected to backend APIs.
- Designed a centralized authentication website deployed on Azure and used across multiple systems.
- Deploy containerized services to Ubuntu infrastructure with Docker and Nginx.
- Automate delivery using GitHub Actions and GitHub Container Registry.
- Integrate Firebase push notifications and shape architecture across web, mobile, and backend layers.

■ FOCUS

.NET backend engineering

Full-stack development

System architecture

Identity and access

Enterprise applications

Mobile applications

Dockerized delivery

GitHub Actions CI/CD

■ LANGUAGES

Vietnamese: Native

English: Professional working proficiency

■ PREVIOUS EXPERIENCE

Software Developer

February 2022 - January 2024

Utop / AkaChain ecosystem

Vietnam

- Developed the AKC Loyalty enterprise platform with Angular and .NET.
- Migrated application data from SQL Server to MySQL.
- Improved database performance and maintained stable platform services.
- Collaborated through GitLab-based team development workflows.

Software Developer

April 2021 - February 2022

GanNha Technology

Vietnam

- Developed Xamarin mobile applications and .NET backend APIs.
- Worked with Azure, Redis, RabbitMQ, and Azure Blob Storage.
- Delivered backend services for a location-based mobile platform.

Software Developer

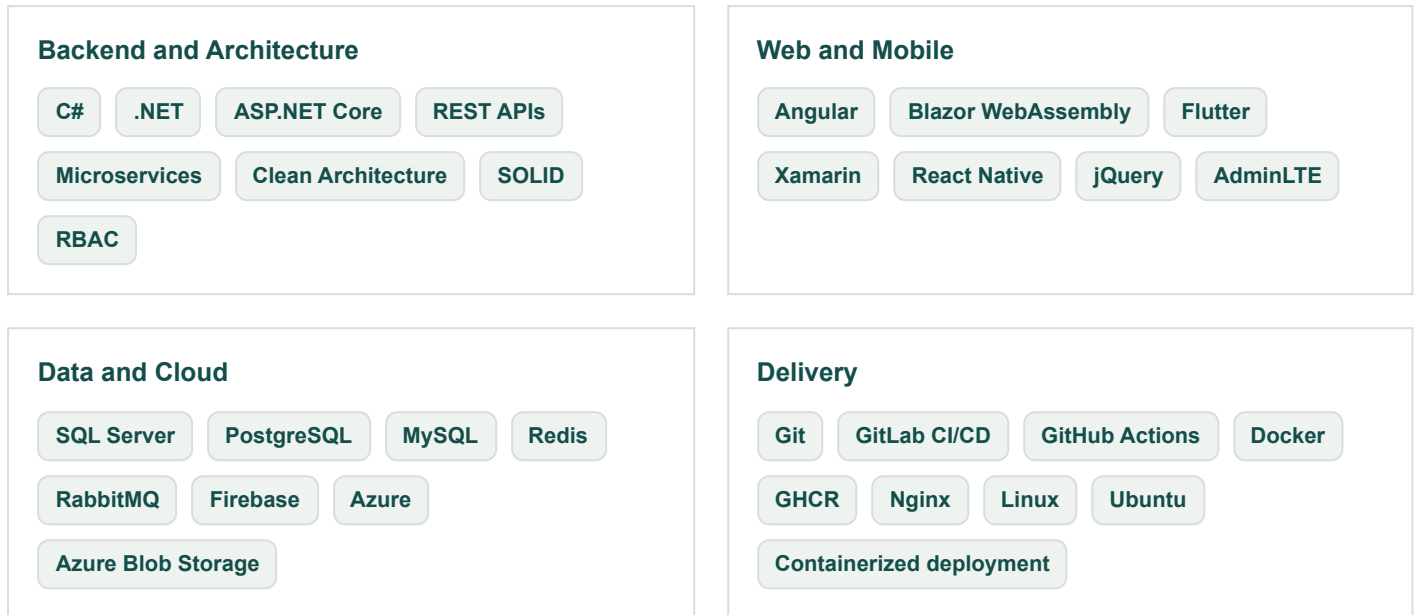

October 2018 - January 2021

IOT Software VN

Vietnam

- Built enterprise systems with ASP.NET MVC, SQL Server, jQuery, AJAX, and AdminLTE.
- Implemented business logic through SQL Server stored procedures.
- Delivered modules for debt, sales, warehouse, product, and reward management.

■ TECHNICAL SKILL MATRIX

■ CORE STRENGTHS

Backend and system design

- Designs APIs, business services, data access layers, authentication flows, and authorization boundaries.
- Structures applications with maintainability in mind using layered architecture, SOLID principles, and practical design patterns.
- Builds identity and role-based access solutions that can serve multiple internal systems.

Enterprise delivery

- Develops across backend, web, and mobile surfaces while keeping system behavior consistent.
- Works with SQL Server, MySQL, Redis, RabbitMQ, Firebase, and Azure services in production-oriented systems.
- Maintains stable business platforms and improves database performance where needed.

DevOps and operations

- Containerizes services and deploys them to Linux infrastructure with Docker and Nginx.
- Automates build and deployment workflows with GitHub Actions, GitLab CI/CD, and container registries.
- Communicates technical tradeoffs with a practical focus on reliability, maintainability, and delivery speed.

■ EDUCATION

Bachelor of Information Technology

Graduated

Dong Nai Technology University

- Studied software development, databases, programming fundamentals, and information technology foundations.
- Continues to deepen expertise in system architecture, distributed systems, cloud infrastructure, and DevOps.

■ CERTIFICATIONS AND LEARNING

- Continuous learning in distributed systems, cloud architecture, DevOps, and maintainable backend design.
- Hands-on practice with containerized deployments, CI/CD pipelines, identity systems, and enterprise application architecture.

■ WORKING STYLE

I prefer small, concrete iterations: understand the goal, choose a simple stack, build the first usable version, verify it with real commands, then polish based on what the product actually needs.

■ INTERESTS

Software architecture

Cloud computing

System design

Dependable delivery
